

# Stimulating students for STEM careers and reducing the skills gaps

Science on Stage Europe provides a network for science teachers from primary to secondary school to exchange excellent teaching concepts from teachers for teachers and to share ideas across Europe. The ultimate goal is to improve science teaching by supporting the teachers. Through this we will encourage more schoolchildren to consider a career in science, ICT or engineering. Science on Stage reaches 100,000 STEM teachers in 32 countries.

Teachers as multipliers
